

cinneo® Track

Track dolly running on the ceiling, on the floor or at a wall

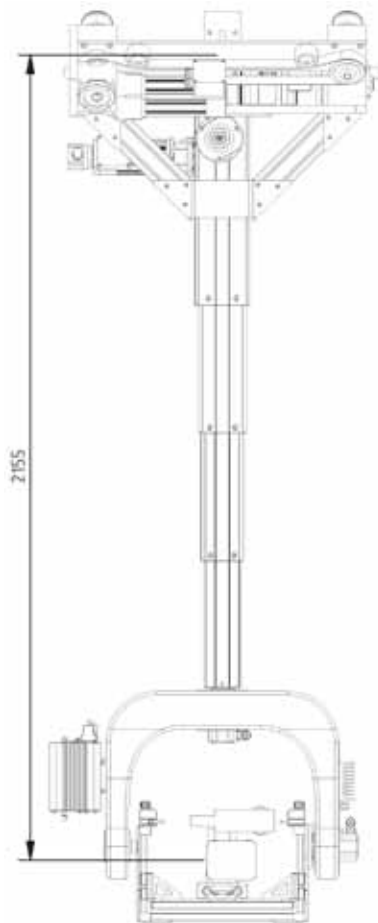

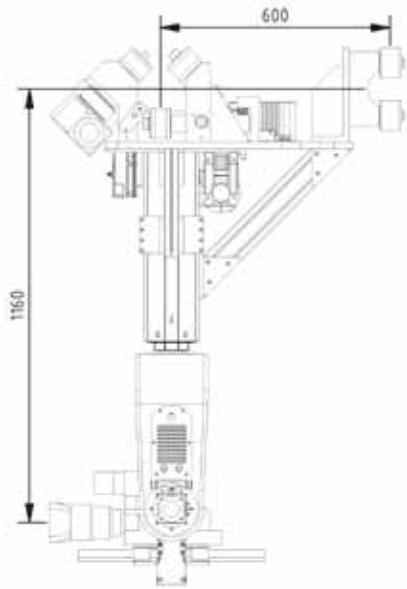

Cinneo® Track is a track dolly carrying a lift axis and a pan-tilt head. It is possible to mount the track on the ceiling, on the floor or at a wall. The shape of the track can be defined by the customer. Possible track shapes are straight, circle, part of a circle or a mixture of both. The dolly is running silently and fast with speeds up to 1 m/s. Motion of lift axis and pan-tilt head is fully synchronized. Encoders of all axis are absolute so after power on no indexing run is necessary. The overall construction is robust and nearly maintenance free. As pan-tilt head cinneo PT is applied. Please see product information sheet „cinneo PT head“ for details. Cinneo Track is controlled by cinneo control panel. It optionally delivers virtual tracking data.
